ART 422:

Strong double acting flush bolt for metal doors and windows.

The flush bolt is supposed to be inserted and screwed in the profile of a metal door or window.

Applying 2 threaded bars M8 in the suitable length on both sides of the bolt and eventually 2 metal caps (our art. 420/c) allows the opening or the closing of the door operating on the lever.

The closing is done in both senses due to the double action performing upward and downward.

Materials:

- Brass lever
- Steel body electro galvanized with zinc thickness minimum 5 micron
- Spring in special hardened steel

We suggest normal scheduled inspection cleaning and maintenance or eventually the substitution if damaged.
